2025 Interdisciplinary Contest in Modeling (ICM)®
Press Release—May 2, 2025

COMAP is pleased to announce the results of the 27th annual Interdisciplinary Contest in Modeling (ICM). This year 6,364 teams representing institutions from fourteen countries/regions participated in the contest. Fifteen teams earned OUTSTANDING designations or won a named award, their institutions are:

Beijing Normal University, China (INFORMS Award)
BNU-HKBU United International College, China (AMS Award)
China Agricultural University, China (SIAM Award)
China University of Labor Relations, China (SIAM Award)
Hangzhou Dianzi University, China (Leonhard Euler Award)
Nanjing University of Posts & Telecommunications, China (INFORMS Award)
National University of Defense Technology, China (COMAP Scholarship Award & SIAM Award)
South China agriculture university, China (AMS Award)
University of Electronic Science and Technology of China, China (COMAP Scholarship Award & Vilfredo Pareto Award)
University of Electronic Science and Technology of China, China (COMAP Scholarship Award & Rachel Carson Award)
University of Electronic Science and Technology of China, China
Wuhan University, China (INFORMS Award)
Xi'an University of Technology, China (AMS Award)

Harvey Mudd College, CA, USA (Finalist - MAA Award)
Wake Forest University, NC, USA (Meritorious Winner - MAA Award)

This year's contest ran over a single weekend Thursday, January 23 to Monday, January 27, 2025. During that time, teams of three students researched, modeled, and wrote a solution to an open-ended interdisciplinary modeling problem. The 2025 ICM was an online contest, where teams registered and obtained contest materials through COMAP's ICM Website.

ICM teams chose one of the following three problems: The D problem required teams to develop a network model of transportation systems in Baltimore, Maryland, USA. Teams were then required to use their model to consider projects addressing various transportation issues in Baltimore. They then shared a couple of their proposed projects with the mayor of Baltimore. The E problem required teams to develop a model to track habitat change on a plot of land that had been converted from a forest into farmland. This model was required to account for both human decisions and natural processes. Teams then used the results of their modeling to advise a farmer. The F problem required teams to develop a theory for what makes a strong national security policy and to present a data-driven analysis to support their theory. The problem explicitly asked teams not to develop a new measure of cyber security, but rather to seek meaningful patterns in the effectiveness of national cybersecurity policies and/or laws with respect to the national contexts in which they are enacted. Teams then used their results to advise national policy leaders. For all three problems, the student teams produced creative and relevant solutions to these complex questions and built models to handle the tasks assigned in the problems. The problems also required data analysis, creative modeling, and scientific methodology, along with effective writing and visualization to communicate their team's results in a 25-page report.

A selection of the Outstanding summaries will be featured in *The UMAP Journal*, along with commentaries from the problem authors and judges. This year's judges remarked that due to the multi-disciplinary nature of the problems, teams solved these problems using a variety of methods and tools. This allowed teams to showcase their strengths in many diverse areas including agricultural science, data science, operations research, transportation science, computer science, environmental science, network science, policy, statistics, and sustainability.

2025 ICM Statistics

- **6364 Teams Participated**
- **902 Problem D (14%)**
- **3323 Problem E (52%)**
- **2139 Problem F (34%)**
- **13 Outstanding Winners (<1%)**
- **151 Finalist Winners (2%)**
- **426 Meritorious Winners (7%)**
- **1444 Honorable Mentions (22%)**
- **4203 Successful Participants (66%)**
- **6 Unsuccessful Participants (<1%)**
- **113 Disqualified Teams (2%)**
- **8 Not Judged (<1%)**

ICM is associated with COMAP's Mathematical Contest in Modeling (MCM), which was held during the same weekend. ICM is designed to develop interdisciplinary problem-solving skills in science, technology, engineering, mathematics (STEM) and the humanities, as well as competence in data science and written communication. Over the years the ICM problem topics have included environmental science, biology, chemistry, political science, operations research, information science, public health, sports analytics, network science and sustainability. Each team is encouraged to include team members from a range of disciplinary and interdisciplinary interests in applied problem solving and modeling. To obtain additional information and a listing of all the team designations, please visit the ICM Website at: www.mcmcontest.org.

Major start-up funding for the ICM was provided by a grant from the National Science Foundation (through Project INTERMATH) and COMAP. Additional support is provided by the Institute for Operations Research and the Management Sciences (INFORMS), The Society for Industrial and Applied Mathematics (SIAM), The Mathematical Association of America (MAA) and The American Mathematical Society (AMS). COMAP's Mathematical Contest in Modeling and Interdisciplinary Contest in Modeling are unique among modeling competitions in that students work in teams to find a solution. Centering its educational philosophy on mathematical modeling, COMAP uses mathematical tools to explore real-world problems. It serves the educational community as well as the world of work by preparing students to become better informed—and prepared—citizens, consumers, workers, and community leaders.
